

# Hexagon Panels

Dri-Design has always been passionate about creating new and innovative designs in metal facades. We often find our inspiration from places like nature, art, or even a piece of fabric. By creating more options and a broader pallet with which to design, we aim to empower and inspire our customers.

The Hexagon Series is the newest design innovation from Dri-Design. This product incorporates Dri-Design's unique installation efficiencies into a fully engineered, 6-sided, metal rainscreen panel system. The panels come in 2 sizes, with several different depths also available. When installed, this system creates a unique, eye-catching honeycomb pattern that is hard to ignore.
